PROFILE

A **Software Engineer** with 3+ years of experience building scalable, high-performance applications across fintech, SaaS, and logistics. Skilled in REST API design, database optimization, authentication systems, background processing, and cloud deployment using Python, Node.js, PostgreSQL, Redis, and Docker. Experienced in delivering secure, production-ready solutions end-to-end, from system architecture and data modeling to API integration and deployment in Agile, CI/CD-driven environments.

TECHNICAL SKILLS

Languages:	Python, JavaScript
Backend:	Django, DRF, FastAPI, Flask, Express.js, Node.js
Databases:	PostgreSQL, MongoDB, MySQL, Redis
DevOps & Cloud:	Docker, AWS, Git, CI/CD, Celery, BullMQ, RabbitMQ
Auth & Security:	JWT, OAuth2/OIDC, Session-based Auth, Rate Limiting
Payments:	Stripe, Flutterwave, Paystack
Practices:	REST API Design, TDD, Microservices, Swagger/OpenAPI
Frontend:	React.js, Tailwind CSS (supporting knowledge)

PROFESSIONAL EXPERIENCE

Back-End Developer | JointEarn (Full-Time) Oct 2025 – Present

Nigerian creator economy & monetization platform (news, streaming, ecommerce, music) — architected for 1,000+ concurrent users at launch

- Built a scalable news management microservice integrated with platform authentication for secure user interactions.
- Developed ML-based content flagging and multilingual translation services to improve content safety and accessibility.
- Optimized PostgreSQL queries with indexing, Redis caching, and pagination, reducing API latency by 70%+.
- Implemented rate limiting, real-time notifications, structured logging, and robust error handling to enhance reliability.
- Managed media uploads and CDN delivery using Multer and BunnyCDN; produced comprehensive Swagger API documentation for seamless frontend integration.
- Secured REST APIs with JWT authentication and delivered full CRUD, reporting, and moderation capabilities.

Tech Stack: Node.js, Express.js, Python, FastAPI, PostgreSQL, Redis, BullMQ, JWT, Swagger

Back-End Developer | Dispatch Hub (Volunteer) Oct 2025 – Jan 2026

Nigerian logistics & delivery coordination platform

- Developed and maintained a high-performance REST API for mobile app integration.
- Implemented JWT authentication for secure user access.
- Integrated Google Maps API for real-time location tracking.
- Utilized Redis for caching and fast data retrieval.
- Designed scalable endpoints with Django REST Framework ensuring seamless mobile client interaction.

Tech Stack: Django, DRF, Python, Redis, JWT, Google Maps API

Software Engineer | Altivox (Freelance) Mar 2025 – Jul 2025

- Built and deployed a logistics & delivery tracking system using Django, DRF, PostgreSQL, Tailwind CSS, and JavaScript.
- Implemented OAuth-based authentication and role-based access control for secure user and admin workflows.
- Integrated Celery background tasks for email notifications, delivery updates, and system alerts.
- Developed an interactive KPI dashboard and reporting features, improving operational visibility.
- Optimized database queries and API performance, achieving ~35% performance improvement and ~25% better on-time delivery rates.

Tech Stack: Django, DRF, Python, JWT, Celery, PostgreSQL

PROJECTS

GoalSave — Django · Django REST Framework · PostgreSQL · JWT Authentication · Paystack API · Database Transactions · Webhooks · Analytics · Docker · Redis · Celery · Fintech

GitHub: <https://github.com/Tboiii-123/GoalSave>

- Developed a secure goal-based savings REST API enabling users to create savings goals, manage digital wallets, and securely fund accounts through Paystack.
- Implemented JWT authentication, user profiles, wallet management, and complete goal lifecycle operations, including create, pause, resume, complete, and delete functionality.
- Engineered a secure payment pipeline with Paystack webhook signature verification, idempotent payment processing, and atomic database transactions to ensure reliable wallet crediting and prevent duplicate deposits.
- Designed a wallet ledger system that records every financial transaction, providing a complete audit trail for deposits, transfers, refunds, and goal funding activities.
- Built analytics endpoints for savings summaries, top-performing goals, and period-based reports using efficient Django ORM aggregations, laying the foundation for scalable financial insights.

Mini Automated Grading System — *Django · DRF · PostgreSQL · JWT · Swagger · scikit-learn*

GitHub: <https://github.com/Tboiii-123/acad-ai-mini-assessment-engine>

- Built a scalable CBT/examination API supporting bulk answer submissions in a single atomic request, reducing DB writes by ~60% compared to per-question processing. .
- Implemented JWT authentication & authorization across 8 RESTful endpoints covering registration, login, exam listing, submission, and results.
- Integrated TF-IDF + cosine similarity AI grading engine for semantic answer evaluation — goes beyond keyword matching to score intent and meaning.
- Documented full API surface with Swagger/OpenAPI, ready for Postman and frontend integration.

Computer Village Parts Network — *Python · Django · DRF · Celery · OAuth · JWT · Redis*

GitHub: <https://github.com/Tboiii-123/computer-village-parts-network>

- Built a private B2B platform serving 50+ verified laptop parts dealers, replacing unorganized WhatsApp sourcing and reducing order resolution time by ~40%.
- Implemented JWT authentication and a 3-step admin-approved dealer onboarding workflow, reducing unauthorized access attempts to zero.
- Integrated Redis caching and database indexing, improving API response times by ~45% and handling 500+ requests/min without degradation.
- Designed 5 modular Django apps (accounts, requests, chat, moderation, notifications) with 20+ API endpoints supporting end-to-end private dealer negotiation flow.

CreatorLens — *Django · Redis · Celery Beat · PostgreSQL · Docker · CI/CD · Cloudinary*

GitHub: <https://github.com/Tboiii-123/CreatorLens>

- Built a backend analytics platform for creator engagement tracking, handling real-time post views with sub-second response using Redis counters
- Engineered a cache-first analytics pipeline (Redis → PostgreSQL) cutting DB read load by ~60% on dashboard requests.
- Automated daily and weekly analytics reporting via Celery Beat with a 60-second Redis-to-PostgreSQL sync cycle — zero data loss under continuous load.
- Containerized full stack (Django, Redis, Celery, PostgreSQL) with Docker; validated system with 100+ seeded records simulating real production usage .
- Designed layered async architecture: Django REST API → Redis cache → Celery workers → PostgreSQL, decoupling request handling from data persistence entirely.

EDUCATION

Advanced Diploma in Software Engineering

Aptech, Lagos

Python Programming Certificate

NIIT, Lagos

Data Analyst Certificate

SkillAhead, Lagos
