## Profile

**Python Developer** with 3+ years of experience building and deploying high-performance web applications across fintech, SaaS, and logistics domains. Skilled in designing scalable RESTful APIs, optimizing relational databases, and implementing security best practices for production-ready systems. Proficient in authentication and authorization (JWT, OAuth2/OIDC), AI/ML integration, and third-party service integration (payment gateways, messaging APIs, analytics). Experienced in containerization with Docker and deployment on AWS, Render, and Heroku. Strong background in Agile development, TDD, and CI/CD, with a proven ability to deliver end-to-end solutions - from system architecture and database design to frontend integration, cloud deployment, and model inference pipelines.

## Technical Skills

- **Programming Languages:** Python, JavaScript, Java
- **Frameworks & Libraries:** Django, Django REST Framework (DRF), FastAPI, Flask, React.js, Express.js
- **Frontend & UI:** HTML5, CSS3, Tailwind CSS, Bootstrap, Chart.js
- **Databases:** PostgreSQL, MongoDB, MySQL, SQLite, Supabase, Appwrite
- **Authentication & Authorization:** JWT, OAuth2/OIDC, Session-based Authentication
- **Payment Integrations:** Stripe, Flutterwave, Paystack
- **Cloud & DevOps Tools:** Docker, AWS, Heroku, Render, Git, Redis, Celery, Cloudinary, Zapier, RabbitMQ
- **Web Scraping & Automation:** Selenium, BeautifulSoup, Requests
- **Development Practices:** Test-Driven Development (TDD), CI/CD, REST API Design, Authentication & Security.

## Professional Experience

### Back End Developer | Dispatch Hub

- Developed and maintained a high-performance REST API for mobile app integration.
- Implemented JWT authentication for secure user access.
- Integrated Google Maps API for real-time location tracking.
- Utilized Redis for caching and fast data retrieval.
- Designed scalable endpoints with Django REST Framework.
- Ensured seamless interaction between mobile clients and the backend.
- Built robust, secure, and efficient APIs for real-time data access and improved user experience.

#### Key Skills & Technologies:

Django, Django REST Framework, Python, Redis, JWT Authentication, Google Maps API, API Development

### Software Engineer – Altivox (Freelancer)

- Built and deployed a **logistics & delivery tracking system** using **Django, DRF, PostgreSQL, Tailwind CSS, and JavaScript**.
- Designed and consumed **RESTful APIs** with asynchronous JavaScript for real-time updates.
- Implemented **OAuth-based authentication** and role-based access control for secure user and admin workflows.
- Integrated **Celery background tasks** for email notifications, delivery updates, and system alerts.
- Developed an **interactive KPI dashboard** and reporting features, improving operational visibility and decision-making.
- Optimized database queries and API performance, achieving **~35% performance improvement** and **~25% better on-time delivery rates**.

#### Key Skills & Technologies:

Django, Django REST Framework, Python, JWT Authentication, API Development, Celery

### Python Developer – Bincom Dev Center, Lagos

- Designed and implemented Django-based applications with secure authentication and REST APIs.
- Applied data science libraries (Pandas, NumPy, Scikit-learn) to prototype analytics and predictive features.

### Software Engineer – Power Learn Project

- Selected as part of the 2024 PLP Africa Cohort 4, a competitive training program for emerging software engineers.
- Expanded expertise across web development (HTML, CSS, JavaScript) and mobile app development with Dart and Flutter.
- Strengthened backend development skills through hands-on projects using Django and Python programming.
- Collaborated with peers in an Agile learning environment to deliver functional, real-world applications.

## Projects

### E-commerce Web Application (Python + Django)

- Built a full-stack e-commerce platform enabling users to browse, add to cart, and securely checkout using integrated payment gateways (Paystack/Stripe).
- Implemented email-based authentication, password reset, and role-based access control (admin/customers).
- Designed normalized PostgreSQL schema, achieving 30% faster query response times through indexing and optimization.
- Integrated Celery with Redis for order notifications and automated email receipts.
- Deployed to Render with environment-specific configurations and managed product images via Cloudinary.

### **Logistics Web Application (Python +Django +DRF + Celery + Oauth + JWT Authentication +HTML + Tailwind css + JavaScript + Async fetching)**

- Designed and developed a full-featured logistics management web application for delivery operations and order tracking.
- Built a RESTful API using Django Rest Framework (DRF) to manage shipments, users, orders, and logistics workflows.
- Implemented OAuth-based authentication (Google OAuth) for secure third-party login and user onboarding.
- Integrated role-based authentication and authorization for admins, and drivers.
- Used Celery for asynchronous background tasks such as email notifications, order status updates, and system alerts.
- Implemented automated email services for order confirmations, delivery updates, and administrative notifications.
- Developed a responsive frontend using HTML, Tailwind CSS, and JavaScript with a clean, modern UI.
- Consumed backend APIs using asynchronous JavaScript (async/await, fetch) for dynamic, real-time UI updates.
- Applied pagination, input validation, and structured error handling to improve API performance and reliability.
- Ensured secure data handling, token-based authentication, and proper request validation.
- Followed clean code principles and modular architecture for maintainability and scalability.
- Optimized system performance by offloading heavy tasks to background workers.

### **Vending Machine Platform (Python + Django + DRF + Swagger docs + Pytest + JWT Authentication )**

- Developed a full-featured vending machine API with Django REST Framework, supporting product management, purchases, deposits, and session handling.
- Implemented role-based access control: **buyers** can deposit coins, buy products, and reset deposits; **sellers** can create, update, and delete products.
- Designed robust purchase logic: verifies product availability, calculates total cost, manages user deposits, and returns optimal change using a custom `calc_change` utility.
- Built JWT-based authentication with active session tracking, preventing concurrent logins and enabling secure session termination.
- Integrated Swagger documentation (`drf_yasg`) for all endpoints, including request/response schemas and automatic API exploration.
- Applied comprehensive testing using `pytest` with Django test client, achieving **100% coverage** for views, serializers, and permission rules.
- Designed serializers with validation rules (e.g., product cost must be multiples of 5) to enforce business constraints and improve data integrity.
- Structured a maintainable, modular backend with clear separation of concerns for serializers, views, utils, and models.

### **Referral Email Automation Platform (Python + Django)**

- Re-engineered the legacy email notification system by replacing direct API calls with a Zapier-based automation workflow.
- Implemented a Django API (`start_workflow`) that receives JSON payloads, validates input, and securely forwards data to Zapier webhooks.
- Added environment-aware logic (staging vs production) for safe testing and reliability.
- Designed exception handling with custom logging to improve resilience and error tracking.
- Built a React.js frontend (App Router) with a form-based UI to trigger referral workflows seamlessly.
- Centralized all third-party email operations into a maintainable automated pipeline, reducing integration overhead.

### **Multi-Tenant Project Management API (FastAPI + Swagger doc + JWT Authentication )**

- Designed and implemented a FastAPI backend to manage tenants, users, and projects with role-based access control.
- Build authentication and authorization using JWT, including login, profile endpoints, and admin-only permissions.
- Implemented project CRUD tied to tenant ownership, ensuring isolation between companies.
- Created separate flows for user signup and tenant admin creation for company-level onboarding.
- Added validation and exception handling for secure, predictable API responses.
- Integrated SQLAlchemy ORM with PostgreSQL (or SQLite for dev) and documented endpoints with Swagger UI.

## **Education**

Aptech, Lagos – Advanced Diploma in Software Engineering

NIIT, Lagos – Python Programming Certificate
